

**ABSTRACT OF THE INVENTION**

A system and method for image capture, storage, and retrieval, which captures one or more images in a digital format and stores the images in a database to improve their accessibility. The system and method also stores the images in a smaller physical space than conventional systems and may be used with a variety of image capture devices. Furthermore, the system and method may also allow access to the images from remote locations by way of a computer network such as the Internet.
